SUMMARY

Backend Software Engineer with 4+ years of experience building REST APIs and event-driven microservices in Fintech, logistics, and government sectors. Specialized in NestJS/TypeScript, Ruby, PostgreSQL, and cloud platforms (AWS, GCP). Proven track record reducing delivery cycles by 50% through AI-Driven Development (Cursor, Claude). Experienced in scalable architectures, asynchronous processing, and high-coverage testing.

EXPERIENCE

Solvento | January 2022 - June 2026.

Backend Software Engineer:

- Designed and optimized API endpoints across microservices (Ruby, Grape) and scalable monoliths (NestJS, TypeScript) in a Fintech environment, achieving 95%+ unit test coverage.
- Built event-driven, asynchronous processing on AWS (Lambdas, SQS, S3) and Google Cloud (Cloud Tasks, Pub/Sub, GCS), including an invoice pipeline with ZIP/XML parsing and SAT validation, and async account statement generation per customer.
- Strengthened reliability and security at scale: idempotent API requests via Redis caching to prevent duplicate transactions, plus a biometric KYC onboarding flow (Incode) mitigating fraud risk.
- Applied AI-Driven Development (Cursor + Claude, SDD with autonomous agents), reducing delivery cycles by 50%, and automated support workflows with Python scripts.

Coordinación del Sistema Penitenciario de Michoacán | May 2021 - September 2021

Software Developer:

- Designed and deployed from scratch a cross-platform mobile application (iOS & Android) using Flutter that centralized critical data queries, enabling executive staff to search and filter records efficiently.
- Architected secure REST API endpoints using Django and PostgreSQL to ensure real-time data integrity and high availability.
- Ensured operational continuity by providing preventive and corrective maintenance to legacy internal systems based on CodeIgniter.

EDUCATION

Universidad Michoacana de San Nicolás de Hidalgo

B.S. in Computer Engineering | August 2015 – August 2020

SKILLS

- **Programming Languages:** TypeScript, Ruby, Python.
- **Frameworks & Backend Technologies:** Node.js, NestJS.
- **Mobile Development:** Flutter (iOS & Android).
- **Databases & Caching:** PostgreSQL, Redis (Idempotency & Caching).
- **Cloud & DevOps:** AWS (Lambdas, SQS, S3), Google Cloud (Cloud Tasks, Pub/Sub, GCS), GitLab CI/CD, Docker.
- **Integrations & Tools:** LoanPro (Financial Core), Incode (Biometrics/KYC), Jira, Git.
- **AI-Driven Development:** Spec-Driven Development (SDD), autonomous code agent/sub-agent architecture, and workflow optimization using LLMs (Cursor, Claude).
- **Languages:** English (B2 - Professional Working Proficiency) | Spanish (Native).
- **Soft Skills:** Self-management, effective communication, adaptability, complex problem-solving, proactivity, and teamwork
